Your purchase of this UV LIGHT METER marks a step forward for you into the field of precision measurement. Although this METER is a complex and delicate instrument, its durable structure will allow many years of use if proper operating techniques are developed. Please read the following instructions carefully and always keep this manual within easy reach.
Storage for the "UV sensor"

UV sensor is with extremely precise structure. Once don't use it, be sure to store it in the dry environment. For example, put the whole sensor including Desiccant (Drier) into the Plastic bag and seal the bag as tightly as possible (refer the following figure).

Take the sensor out of the bag only when use it.

Comply to above method will extend the life of UV sensor. Otherwise, the gain of the UV SENSOR may be decreased and shorten the calibration period. It is also necessary to replace the Desiccant (Drier) periodically.

1. FEATURES

* Professional, high quality UV meter.
* Ultra-violet irradiation measurement for UVA & UVB.
* UV detector spectrum from 290 nm to 390 nm.
* Two ranges: 2 mW/cm^2, 20 mW/cm^2.
* Exclusive UV sensor structure.
* Sensor with cosine correction filter.
* Build Zero button.
* Microprocessor circuit provides high reliability and durability.
* Separate UV LIGHT probe allows user to measure the UV light at an optimum position.
* LCD display, easy readout.
* RS-232/USB computer interface.
* DC 9V battery power supply.
* Build in DC 9V power adapter input socket.
* Heavy duty & compact housing case.

2. APPLICATIONS

**Industrial**

* Monitoring blue light radiation hazards in welding.
* UV sterilization
* Graphic arts.
* Photochemical matching.
* UV EPROM erasure.
* Photoresist exposure.
* Curing of inks, adhesives and coatings.

**Laboratory**

* Weathering "degradation studies."
* UV sterilization
* Virology.
* Microbial genetics.
* DNA research. * Biologic hoods.
* General laboratory use.
## 3. Specifications

4. FRONT PANEL DESCRIPTION

Fig. 1

4-1 Display
4-2 Power Button
4-3 Hold Button
4-4 REC Button
4-5 2 mW/cm² Button (Zero Button)
4-6 20 mW/cm² Button
4-7 Probe input socket
4-8 Battery Compartment/Cover
4-9 Stand
4-10 Tripod Fix Nut
4-11 RS-232 Output Terminal
4-12 DC 9V Power Adapter Input Socket
4-13 UV Probe Handle
4-14 UV Sensor
4-15 UV Probe Plug
5. MEASURING PROCEDURE

1) Connect the "Probe Plug" (4-15, Fig. 1) to the "Input Socket" (4-7, Fig. 1).

2) Power on by pushing the "Power Button" (4-2, Fig. 1).
   * After power ON if push the "Power Button (4-2, Fig. 1) once a while again will power OFF the meter.

3) Range selection
   a. Select the "2 mW/cm²" range by pushing the "2 mW/cm² Button" (4-5, Fig. 1).
   b. Select the "20 mW/cm²" range by pushing the "20 mW/cm² Button" (4-6, Fig. 1).

4) Use the hand to hold the "UV Probe Handle" (4-14, Fig. 1) and face the "UV Sensor" (4-13, Fig. 1) to the measuring UV light opposite. then the Display (4-1, Fig. 1) will show light values exactly.

5) Data Hold
   During the measurement, pressing the "Hold Button" (4-3, Fig. 1) will freeze the display value, at the same time the LCD will show the "HOLD" indicator.
   To release the Data Hold function, just pressing the "Hold Button" again, then the "HOLD" indicator will be disappeared and cancel the Data Hold function.

6) Data Record (Max., Min. reading)
   * The data record function records the maximum and minimum readings. Press the "REC Button" (4-4, Fig. 1) once to start the Data Record function and there will be a "REC." symbol on the display.
   * With the "REC." symbol on the display:
     a) Press the "REC Button" (4-4, Fig. 1) once, the "REC. MAX." symbol along with the maximum value will appear on the display.
     If intend to delete the maximum value, just press the "Hold Button" (4-3, Fig. 1) once, then the display will show the "REC." symbol only & execute the memory function continuously.
b) Press the " REC Button " ( 4-4, Fig. 1 ) again, the " REC. MIN. " symbol along with the minimum value will appear on the display. If intend to delete the minimum value, just press the " Hold Button " ( 4-3, Fig. 1 ) once, then the display will show the " REC. " symbol only & execute the memory function continuously.

c) To exit the memory record function, just press the " REC " button for 2 seconds at least. The display will revert to the current reading.

6. MEASURING CONSIDERATION

1) As the " 20 mW/cm^2 range " is designed & to measure the UV light values more than 2 mW/cm^2 . If the measured UV light values more than 2 mW/cm^2 , it should select to the " 20 mW/cm^2 range " to get the exact measuring value.

* Under the " 2 mW/cm^2 range " if the " Display show " " - - - - - " , it means the measurement value already over range, it should select to the " 20 mW/cm^2 range ".

2) Zero adjustment

Cover ( blank ) the " UV Sensor " ( 4-13, Fig. 1 ), pushing " Zero Button /2 mW/cm^2 Button " ( 4-5, Fig. 1 ) continuously at least 3 seconds, LCD will reach to zero values.

Note:

**Zero Button ( 4-5, Fig. 1 ) can be operated under the display value ≦ 0.1 mW/cm^2 only.**
3) **Storage for the " UV sensor "**

UV sensor is with extremely precise structure. Once don't use it, be sure to store it in the dry environment. For example, put the whole sensor including Desiccant (Drier) into the Plastic bag and seal the bag as tightly as possible. Take the sensor out of the bag only when use it. Comply to above method will extend the life of UV sensor. Otherwise, the gain of the UV SENSOR may be decreased and shorten the calibration period. It is also necessary to replace the Desiccant (Drier) periodically.

7. **RS232 PC SERIAL INTERFACE**

The instrument has RS232 PC serial interface via a 3.5 mm terminal (4-11, Fig. 1).

The data output is a 16 digit stream which can be utilized for user's specific application. A RS232 lead with the following connection will be required to link the instrument with the PC serial port.

<table>
<thead>
<tr>
<th>Meter (3.5 mm jack plug)</th>
<th>PC (9W 'D&quot; Connector)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Center Pin...............Pin 4</td>
<td></td>
</tr>
<tr>
<td>Ground/shield.............Pin 2</td>
<td>2.2 K resister</td>
</tr>
<tr>
<td>Pin 5</td>
<td></td>
</tr>
</tbody>
</table>
The 16 digits data stream will be displayed in the following format:

\[
\begin{array}{cccccccccccccc}
D_{15} & D_{14} & D_{13} & D_{12} & D_{11} & D_{10} & D_{9} & D_{8} & D_{7} & D_{6} & D_{5} & D_{4} & D_{3} & D_{2} & D_{1} & D_{0} \\
\end{array}
\]

Each digit indicates the following status:

<table>
<thead>
<tr>
<th>D15</th>
<th>Start Word = 02</th>
</tr>
</thead>
<tbody>
<tr>
<td>D14</td>
<td>4</td>
</tr>
<tr>
<td>D13</td>
<td>1</td>
</tr>
<tr>
<td>D12 &amp; D11</td>
<td>Annunciator for Display mW/cm^2 = A8 ( D12 = A, D11 = 8 )</td>
</tr>
<tr>
<td>D10</td>
<td>Polarity</td>
</tr>
<tr>
<td>D9</td>
<td>Decimal Point(DP), position from right to the left</td>

</tbody>
</table>
8. BATTERY REPLACEMENT

1) When the LCD display show the " \[image\] " indicator, it is necessary to replace the battery. However, in-spec measurement may still be made for several hours after low battery indicator appears before the instrument become inaccurate.

2) Open the " Battery Cover " (4-8, Fig. 1) away from the instrument and remove the battery.

3) Replace with 9V battery and reinstate the cover.

4) Make sure the battery cover is secured after change the battery.
